

EVOAQ BATHROOM EXTRACTION

Automatic Environmental Control Software

Low Energy Use

Moisture Control

Building Code & Rental Compliant

Constant Extraction

Designed in New Zealand

SMART CONSTANT EXTRACTION

EVOAQ Extraction removes damp air at the source before it becomes a problem in the rest of your home. Traditional bathroom fans are manually controlled and when switched off leave the room full of moisture.

EVOAQ Environmental Control Software brings the fan to life as soon as the shower comes on and stays on until all the steam is gone. Constant extraction then ensures that the area stays dry and free from dampness by extracting at a very low level without noise or excessive power use.

No more surprises on your power bill with our energy-efficient A-Rated fans.

Compliant with NZ Building Code G4 & Healthy Homes Standards.

Designed and built in Auckland, New Zealand; Installed by HomeSol with more than 20 years experience in NZ homes.
